

ANIMAL SENSES

All animals do not use the same types of body parts to help with their five senses. Give some examples of how animals touch, taste, hear, smell and see differently than humans do.

<u>TOUCH</u> Ex: humans - hands	<u>TASTE</u> Ex. humans - tongue	<u>HEARING</u> Ex. humans - ears	<u>SMELL</u> Ex humans - nose	<u>SIGHT</u> Ex. Humans - Eyes Typ your answer
------------------------------------	-------------------------------------	-------------------------------------	----------------------------------	--

Which of your senses would be most important to you if you lived in the water? Explain your answer.

An animal like a seastar does not have eyes to see images. How would seeing changes in light/shadows protect them from a predator?

Name: _____
